RELEVANT EMPLOYMENT

Local News Lab at Columbia University

Machine Learning Engineer

Design and implementation of network-data powered recommendation system for local newsrooms. Data ingestion, model training, and rec serving infrastructure supports millions of daily page-views.

New York, NY

2021

Acronym

Senior Software Engineer & Data Scientist, Digital Political Ads Measurement

Research, development, and deployment of a statistical model used to predict political messaging effects from social media data throughout the 2020 election season. Development of software used to manage and launch field experiment treatments and surveys on Facebook. Data analysis and presentations of field experiment results.

New York, NY

2020-2021

Facebook

Software Engineer, Civic Engagement and Election Integrity

Technical driver of product intervention experimentation processes, data analysis, and heuristic and metric construction to understand and mitigate politically motivated harassment on Facebook. Launched and analyzed four product experiments across feed ranking, automated content moderation, and user feedback surfaces. Designed international politician data infrastructure initiative along with two other engineers and non profit partner organizations. This data powered the Facebook ballot product in a dozen countries.

New York, NY

2017-2019
